The protractor is an angle measurer, centre square and twist drill grinding gauge in one. It is a combination tool that is always needed. Powder covered.

Centering Square

Double scale

Grinding gauge

A protractor for building-site and workshop use, with double scale, can be read off on both sides.

A centre square perfect for site use by craftsmen. The prismatic recess – greater than 90° – is ideal for centering large circular workpieces.

A twist drill gauge permits the checking and grinding of twist drills wherever required.
